

Social Inequality and challenges in health care provision.

Collaboration in education, science, research in Ministries, medical schools in Africa with more established Western ones to produce vaccines and vaccine roll out. This strategy will help reduce vaccine hoarding and vaccine nationalism...by rich nations of the west.

Key challenges

- Capacity hampered by lack of resources to equip universities with laboratories.
- Access to healthcare services during pandemic was
- Brain drain of talent to the west or south north migration can be reduced by creating opportunities in African countries.
- Reduced vaccine roll affected many families.

Informal settlements were hit by lockouts, social distancing and lack of employment.

Had vaccines been rolled out in good time jobs would not be lost, trauma staying at home causing violence and especially women.

- due to lock downs education was hampered...girl child pregnancy increased.

Therefore, had vaccines been shared equally across the globe more lives would have been saved. Having more resources allocation by donors in partnership with local planning can strengthen access to health and improve infrastructural system.
